To whom it may concern

Dear valued partners,

I am pleased to inform you that Rely⁺On Virkon broad spectrum disinfectant, produced by specialty chemicals company LANXESS, demonstrates extremely rapid efficacy against the SARS-CoV-2 virus.

This is the finding of a recent study LANXESS commissioned through the independent analysis laboratory Microbac Laboratories, Inc. in accordance with the U.S. Environmental Protection Agency (EPA) compliant test methods, for products intended for virucidal hard surface disinfection.

Rely⁺On Virkon achieved rapid and complete inactivation of the SARS-CoV-2 virus at a dilution ratio of 1:100 in just 60 seconds, and at an economical 1:600 in-use dilution with a 10 minute contact time.

Corresponding efficacy data has to be provided for disinfectants that claim to combat SARS-CoV-2. Microbac is one of the few testing laboratories worldwide that U.S. health authority CDC (Center for Disease Control) has certified to undertake such tests.

"The EPA applies rigorous testing standards to companies developing disinfecting products to combat SARS-CoV-2," said Trevor Boyce, Microbac's Chairman and CEO. "We're pleased that LANXESS sought out Microbac to apply those standards to Rely⁺On Virkon, and we congratulate them on having developed a disinfecting product that is effective against SARS-CoV-2."

For further information and up to date news on Rely⁺On Virkon, please ensure to visit our site <https://coronavirus.lanxess.com/> and follow us on LinkedIn under www.linkedin.com/showcase/lanxess-biosecurity.

Stay safe and healthy!

Best regards

Anneliese Bischof
